## TRACK 1 | VR Heritage Tour Interaction & AIGC Visual Design

Design postgraduate combining landscape architecture, Unreal Engine narrative environments, game design and AI-assisted interactive prototyping. Interested in translating spatial and cultural narratives into guided experiences, with practical strengths in interaction rules, visual communication and iterative design.

## EDUCATION

**The Hong Kong Polytechnic University | School of Design** — Aug 2026 - Dec 2027 expected

- MSc in Innovative Multimedia Entertainment (MScIME), Year 1.

**Shenzhen University | Architecture & Urban Planning** — Sep 2021 - Jun 2026

- Bachelor of Engineering in Landscape Architecture. Coursework includes spatial design, landscape planning, CAAD and fine arts.

## SELECTED PROJECTS

**The Forsaken | Solo narrative exploration project** — Aug - Oct 2025

- Designed a first-person experience using three character perspectives, NPC dialogue triggers and photo captions to reveal a fragmented story.
- Planned a circular village route, encounter spacing and environmental changes across narrative loops; tools include UE5, Figma, Photoshop, Maya and Twine.

**Into the Alchemist's House | Game & level designer** — Jul 2024

- In a two-person PC/Web puzzle project, designed draggable layers that change lighting, platform visibility and collision states.
- Documented an 11-level progression from mechanic introduction through practice, variation and combination, using spatial layout and visual feedback to teach rules.

**ORBIT | Interaction design & AI-assisted prototyping** — Nov 2026

- Defined spatial card navigation, grouping, favorites and undo; used Codex to assist HTML/CSS/JavaScript and Three.js prototype implementation.
- Iterated planet customization, search settings and ring dragging using reported trial feedback. Source, demo and process record: github.com/Lirenji2025/Tabs-around-the-earth.

## RELEVANT EXPERIENCE

**Xiamen Dianchu Technology, Guangzhou | Game Design Intern** — Sep - Nov 2025

- Researched comparable games and player reviews; independently produced two proposals covering settings, core loops and system mechanics.
- Drew three character concepts with eight-frame pixel animations for each, plus plant and environment assets; evaluated a 2D project and proposed gameplay improvements.

## TOOLS & LANGUAGES

**Spatial / visual:** Unreal Engine, Blender, Maya, Rhino, Adobe Photoshop and Illustrator.
**AI-assisted workflow:** ChatGPT and Codex for concept-to-prototype iteration; design documentation and feedback-driven refinement.
**Languages:** Mandarin Chinese (native), English (intermediate), Cantonese (beginner).
