TRACK 2 | AI Agents in Everyday Community Life

IME postgraduate with game design, AI-assisted interaction prototyping and public-facing event experience. Interested in exploring how people of different ages understand and use everyday AI agents, turning observed needs into approachable prototypes and documenting what helps or hinders use.

EDUCATION

The Hong Kong Polytechnic University | School of Design Aug 2026 - Dec 2027 expected

- MSc in Innovative Multimedia Entertainment (MScIME), Year 1.

Shenzhen University | Architecture & Urban Planning Sep 2021 - Jun 2026

- Bachelor of Engineering in Landscape Architecture. Coursework includes spatial design, landscape planning, CAAD and fine arts.

INTERACTION & PROTOTYPING PROJECTS

ORBIT | Interaction design & AI-assisted prototyping Nov 2026

- Defined a playful spatial browsing concept with hover focus, enter/return, dwell-to-group, favorites and recoverable closing.
- Used Codex to assist a HTML/CSS/JavaScript and Three.js prototype with browser-local persistence, reduced-motion support and a WebGL fallback.
- Turned reported trial feedback into changes to planet customization, search selection and ring manipulation; documented design decisions and verification. Source and process record.

Hong Kong Radiation Map | AI-assisted data interaction Oct 2026

- Translated readings from 12 Hong Kong Observatory stations into a zoomable map with visual tiers, time filtering and exact values on hover.
- Used generative AI to assist implementation; reviewed data presentation and unintended map movement, with documented data sources, missing values and limitations. GitHub project.

PEOPLE-FACING & COLLABORATIVE EXPERIENCE

Little Lychee Program, SZU Student Union | Volunteer & Team Leader Dec 2021

- Led nine teammates in organizing interactive activities for children and coordinated on-site roles and delivery.

Sunflower Media | Sales & Marketing Intern Feb - Mar 2023

- Coordinated mascot-visitor interactions and a stamp-collecting activity with an on-site post office to encourage participation.
- Improved booth presentation through decoration and music; daily sales ranged from approximately RMB 1,000 to a peak of RMB 20,000 during the internship.

Xiamen Dianchu Technology, Guangzhou | Game Design Intern Sep - Nov 2025

- Researched game forums and player reviews; independently developed two proposals and reviewed gameplay depth and feedback in an incubation project.

CAPABILITIES & LANGUAGES

Design: Interaction flows, game rules, visual feedback, spatial storytelling and iterative documentation.
Tools: Codex / ChatGPT-assisted prototyping, Figma, Photoshop, Illustrator, UE5, Blender and Maya.
Languages: Mandarin Chinese (native), English (intermediate), Cantonese (beginner).
